

ADVANCED TEST ENVIRONMENTS, INC.

Anti-Theft Device (ATD)

The electronic ANTI-THEFT DEVICE (ATD) is designed for use on all ATV's, utility and motor sport vehicles.

The ATD is an electronic device that integrates into the ignition wiring harness and prevents unauthorized starting of the vehicle. Only the person with the authorized FOB can start the vehicle. The ATD is quickly and easily installed.

The ATD is an RF activated remote power controller. Its purpose is to prevent unauthorized use of the vehicles. The user simply has to press the button on the remote FOB to activate the ATD. Each unit includes a power controller and 1 remote control FOB.

Each unit has a unique authorization code. This prevents anyone else from being able to start the vehicle with a different fob. Only the properly coded fob can authorize the controller to allow starting of the vehicle.

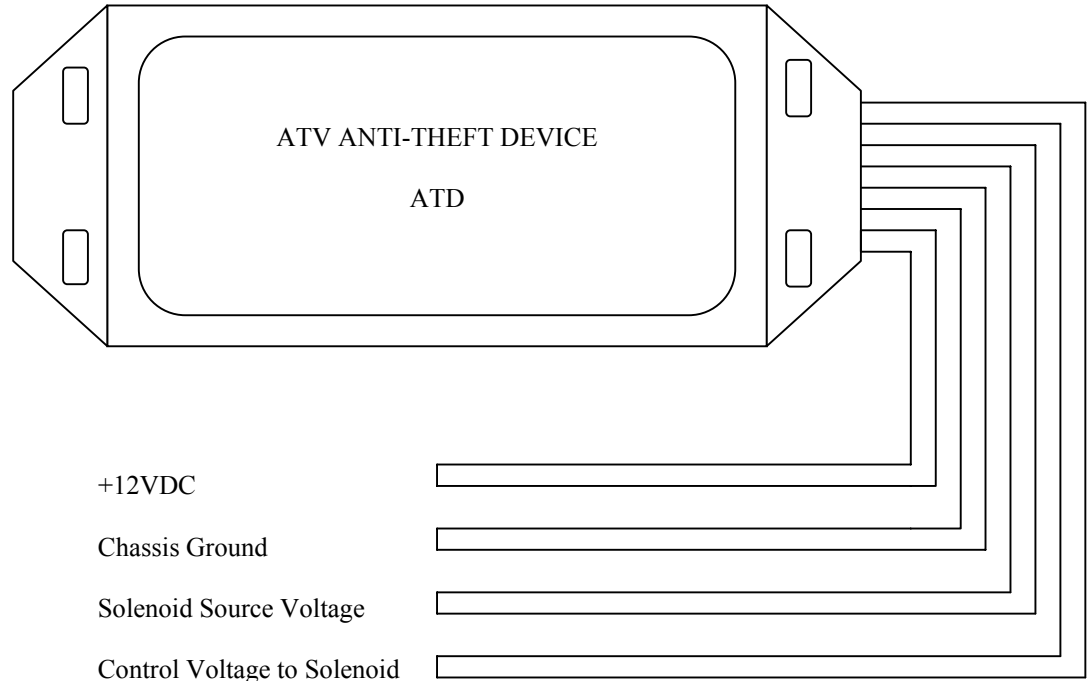

Nothing like it exists for ATV's and utility vehicles on the market today.

Contact your local dealer for more information or visit us at www.advte.com

Advanced Test Environments, Inc.
#287 3000 Old Alabama Road Suite 119 Alpharetta, GA 30022
(770) 521-0024, fax (770) 521-0024
