RE: RELEASE OF THE PORTABLE SURVEILLANCE C&C CENTER

Advanced Test Environments (*ATE*) is proud to announce the release of the portable Surveillance C&C Center for use by Executive Protection Professionals.

PCS&CC is a portable wireless 4 channel surveillance and recording system. It allows the user to place the cameras wherever you want, monitor and record all 4 channels simultaneously.

This system is a state-of-the-art system featuring:

- 4 channel stand alone DVR
- 4 wireless color cameras
- 4 Motion Detectors w/ alarm to base unit
- Rechargeable Lithium Batteries
- Carrying cases
- USB port allowing upload to a PC

The Executive Protection Professional can now set up and monitor an area (halls and walls) from a central point, be notified of any movement, and record activity for later review when necessary. The PCS&CC is much more cost efficient than staffing these areas and simplifies the logistics as well.

The PSC&CC can be found on our web store at www.advte.com to review the full line and optional equipment being offered.

ATE is a technology design and sales company and can be found on the web at www.advte.com.

Sincerely,

David C. Phillips
CEO
